SUMIT KEDAR

B.Tech. - Computer Engineering

Ph: +91-7410148217

Email: sumit.kedar@mitaoe.ac.in

Pune, Maharashtra, India - 412307

LinkedIn: https://www.linkedin.com/in/sumit-kedar-742629256

BRIEF SUMMARY

Highly motivated and adaptable Computer Engineering student with hands-on experience working on multiple real-world projects and internships. Skilled in web development, databases, cloud technologies, and problem-solving. I enjoy learning new tools, building practical solutions, and contributing effectively to team-based projects. With strong analytical skills and a continuous learning mindset, I aim to deliver impactful results in dynamic and fast-paced environments.

KEY EXPERTISE

ReactJS | HTML5 | Front-End Web Development | Django | Node.js | development | MongoDB | PostgreSQL | Oracle Database | backend development | Database Management | AWS | EC2 | S3 | Web API | API Testing | English | python | NLP | AIML

EDUCATION

MIT Academy of Engineering, Pune — 2022 - 2026

B.Tech. - Computer Engineering | CGPA: **7.15** / **10**

ARMY PUBLIC SCHOOL, Pune — 2021

12th | CBSE | Percentage: **82.60** / **100**

ARMY PUBLIC SCHOOL, Pune — 2019

10th | CBSE | Percentage: **91.20** / **100**

AWARDS AND SCHOLARSHIPS

- Got first prize in Intercollege basketball competition
- Got participation certificate for the AVINAYA

INTERNSHIPS

Markytics | IT / Computers - Software — 01 Aug, 2025 - Present

Full Stack Developer Intern

Key Skills: Figma | AIML | ReactJS | Django | Github | Git | SQL | PostgreSQL

Working as a full stack developer on two real-world web applications, contributing to both frontend and backend development.

Developed responsive UI components using React.js, HTML, CSS, JavaScript, and integrated them with backend APIs.

Built and optimized backend services using Django

Designed and implemented REST APIs, handled database operations, and ensured smooth data flow across systems.

Collaborated with the development team in planning, testing, and deploying application features.

Gained hands-on experience in Git, API integration, debugging, performance optimization, and writing clean, maintainable code.

DRDO (HEMRL) | Technology — 09 Jun, 2025 - 31 Jul, 2025

Full Stack Developer

Key Skills: HTML5 | JScript | SQL | CSS | Oracle Database | Apache Tomcat

Built and deployed an “Online Photography Requisition System” during internship at HEMRL (DRDO), Pune.
Developed the application using JSP, HTML, CSS, and JavaScript for the front-end.
Integrated Oracle Database for secure data storage and management.
Deployed the system on Apache Tomcat, ensuring reliable performance.
Delivered the project within the stipulated timeline under the guidance of DRDO scientists.

PROJECTS

HR: TALENT ACQUISITION

01 Sep, 2025 - 31 Oct, 2025

Team Size: 1

Key Skills:

JWT (JSON Web Tokens), Python, Django Framework, HTML5, CSS3, JavaScript (ES6+), React.js
Natural Language Processing (NLP) Machine Learning (ML) PostgreSQL

The AI-Driven Recruitment System is an intelligent web-based hiring platform developed using Python and the Django framework. It is designed to automate and optimize the entire recruitment process — from job posting and resume screening to candidate shortlisting and selection. By integrating machine learning and natural language processing (NLP) techniques, the system analyzes resumes, social-media profiles, and other candidate data to identify top applicants who best match the job requirements.

The backend, powered by Django and Django REST Framework, manages all business logic, authentication, and database operations while exposing secure APIs for frontend interaction. The frontend, built with React.js and styled using Tailwind CSS, provides recruiters and candidates with an intuitive and responsive interface for seamless interaction. PostgreSQL serves as the primary database for storing structured information such as job listings, recruiter details, and application data, while resume files are uploaded, parsed, and processed through Django's file-handling system.

The AI module is powered by the Google Gemini API, enabling advanced natural language processing for resume parsing, skill extraction, and candidate–job matching. Instead of traditional ML pipelines, the system uses Gemini's large language model capabilities to intelligently analyze candidate profiles, evaluate skills, experience, and education, and generate accurate relevance scores.
For security and scalability, the application integrates Firebase Authentication for OTP and Google sign-in, and AWS cloud services are employed for hosting, storage, and deployment. JWT-based authentication ensures secure communication between the frontend and backend. Recruiters can view analytics dashboards powered by Recharts or Chart.js, offering visual insights into applicant trends, job performance, and hiring metrics.

Overall, the project combines the strengths of Django's robust backend, AI-driven intelligence, and modern frontend technologies to deliver a powerful, data-centric recruitment solution. It enhances efficiency by automating repetitive tasks, reduces bias through objective candidate analysis, and improves the overall hiring experience for both recruiters and applicants.

A Website Connecting Excess Food from Hotel chains to Hunger Relief Efforts.

02 Feb, 2024 - 30 Jun, 2024

Team Size: 1

Key Skills: Front-End Web Development Web Development Django ReactJS PostgreSQL

We have identified the use of mobile
technology to reduce food waste management and built an android mobile application that allows individual user or restaurants to donate and share their foods and leftovers with people in need. In order to reduce that food wastage problem through android application we planned to do this project. In this project the guest can login & enter their Location, amount of food and type of food available. Then a simple notification is given to the agent. After seeing the notification of the agent among that location can login & can gather the details of the donor. The donor can hold an account in this application & whenever there is food wastage, he can login and enter the details of food and location. The agent can also hold an account and can retrieve the details. After retrieving the details of the agent can collect food from the donor and can redistribute to the orphans or others. This project is food redistribution is an enormously successful social innovation that tackles food waste and food poverty. The user's details are maintained confidential because it maintains a separate account for each user.

Crop Yield Prediction Using Machine Learning

Mentor: Mrs. Aarti deshpande | **Team Size:** 4

Key Skills:

Machine Learning (Supervised Learning) Frontend Development: HTML, CSS, JavaScript, React.j
Database Management: MySQL
Programming & Development: Python (scikit-learn, TensorFlow, Pandas, NumPy), API Development (Flask/Django)
Data Visualization: Matplotlib, Seaborn, Plotly

Developed a machine learning model to predict crop yields based on weather parameters, soil properties, and historical yield data. The project involved data collection, preprocessing, and model training using algorithms like Linear Regression, Random Forest, and Neural Networks. The model provides insights for farmers to optimize resource allocation and enhance agricultural productivity. Implemented the system with a user-friendly interface for ease of access.

ASSESSMENTS / CERTIFICATIONS

THE COMPLETE WEB DEVELOPMENT COURSE

Key Skills: Front-End Web Development Web Development

Journey to cloud : envisioning your solutions

Key Skills: Cloud Computing

AWS Academy Graduate - AWS Academy Cloud Foundations

Key Skills: AWS Cloud Services Cloud-Computing AWS Storage Networking

Gained expertise in AWS core services like EC2, S3, RDS, and Lambda, along with IAM, VPC, and security best practices. Learned cloud computing, networking, storage, and deployment concepts. Hands-on experience in AWS CloudFormation, monitoring (CloudWatch, CloudTrail), and cost management.

Python Full Stack

Key Skills: HTML5 CSS Javascript ReactJS Bootstrap Python RESTful API Development MySQL

Python Full Stack Development Certification
Built and deployed full-stack applications using Python (Django/Flask) for backend and React.js for frontend.
Designed and implemented RESTful APIs and database management systems (SQL & NoSQL).
Integrated user authentication, data security, and cloud deployment (AWS/GCP).
Worked on real-world projects, applying Agile methodologies and DevOps tools.

PERSONAL INTERESTS / HOBBIES

- Reading Basketball Football Learning new things

IMs
